

# GEMS progress & planning at ECMWF

A.Hollingsworth

# Scope of Presentation

- Schedule of GEMS project
- Current Status
- Near-term Plans
- Longer term plans
- Issues for the transition to operations of GEOLAND, MERSEA, GEMS

# GEMS Schedule

- The start-up
  - Formal start date 1 March 2005
  - Contract signature 13 May 2005
  - Kick-off 4-5 July 2005
- For most partners, the effective start was delayed by several months from the formal start
- Overall schedule at ECMWF
  - Year 1 Build 3 Assimilation systems GHG, GRG, AER
  - Year 2 Run 3 Separate re-analyses
  - Year 2-2.5 System upgrade
  - Year 2.5-3.5 Run unified reanalysis. Build pre-operational system
  - Year 3.5-4.0 Transition to operations – mid-2009

# ECMWF Progress: Operations and Support

- New web collaboration tools have been created to facilitate reporting, document exchange & discussion across the GEMS project
- The PRISM GUI for process control will soon encompass IFS-OASIS4\_CTM coupling
- Data Formatting and Acquisition
  - Revisions have been prepared to the Canadian BUFR proposal for composition variables, and submitted to WMO WG for approval
  - A suite has been developed for automated acquisition of archive data from Space Agencies
  - Several years of SCIAMACHY data and MODIS data have been acquired from ESA & NASA and reformatted in BUFR

Welcome to the collaboration tools of the GEMS project.

Here you will find applications for reporting, document exchange and discussions. Hopefully they will help in the exchange of ideas and opinions within the GEMS community.

You can find help about how to use the tools, input data, attach files and more in the [tutorial](#) pages.

#### [Reporting](#)

This area provides you with a framework for writing reports to the EU or Management board. Visit the main page of **Reporting** area or choose your group:

<a href="#">[GHG]</a>	<a href="#">[GRG]</a>	<a href="#">[AER]</a>	<a href="#">[RAQ]</a>	<a href="#">[PRO]</a>	<a href="#">[MAN]</a>
-----------------------	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

#### [Discussions](#)

This area enables you to discuss and plan your work, share ideas, comment on problems. It is divided into **General** discussions and discussions for each sub-project group:

<a href="#">[GENERAL]</a>	<a href="#">[GHG]</a>	<a href="#">[GRG]</a>	<a href="#">[AER]</a>	<a href="#">[RAQ]</a>	<a href="#">[PRO]</a>	<a href="#">[MAN]</a>
---------------------------	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

#### Recent discussions

Welcome to the General discussions	General Discussions	2005-11-02 11:03	Miha Razinger
Welcome to the MAN discussions	MAN Discussions	2005-11-02 10:59	Miha Razinger

Main areas

# GEMS/PRISM GUI development for data assimilation process control

- New release of prepIFS with OASIS4 configuration ready.
- Testing in December, introduced in January
- Jan- Jun
  - Create run environment for coupled experiments
  - Create run configurations for coupled models
  - Feature enhancement to oasis4 configuration
  - User feedback from job submissions, bug fixes
  - PRISM steering board meeting in January

# Interactions with WMO on BUFR Parameters for GEMS

WORLD METEOROLOGICAL ORGANIZATION  
COMMISSION FOR BASIC SYSTEMS  
MEETING OF EXPERT TEAM ON DATA  
REPRESENTATION AND CODES  
MUSCAT, OMAN, 5 - 8 DECEMBER 2005

ET DR&C/Doc. 3.9(1)  
ITEM: 3.9  
(15.XI.2005)  
ENGLISH ONLY

## BUFR parameters for GEMS

Submitted by Martin Suttie (ECMWF)

---

### Summary and Purpose of Document

This document proposes a few new table B entries to represent aerosols and chemical species

---

### ACTION PROPOSED

The ET DR&C meeting is kindly asked to consider the proposed requirements.

# Progress on Greenhouse Gas Modelling

- **ECMWF & GEMS numerics and physics teams made big developments, so trace constituents are transported by dynamics, boundary layer turbulence & moist convection.**
  - CO<sub>2</sub> is a model variable, advected by the dynamics, and transported by the boundary layer and converctive vertical fluxes
    - Specified climatological surface fluxes.
  - 14 month run with actual meteorology & free-running CO<sub>2</sub>.
    - Validation against Fluxnet data and aircraft data is encouraging.
  - Extensive testing of conservation properties is underway
    - currently there is ~10% / per annum non-conservation
  - Suggestions from the model results of missing land boreal sequestration sink & missing tropical biomass-burning source

# Greenhouse Gas Animation

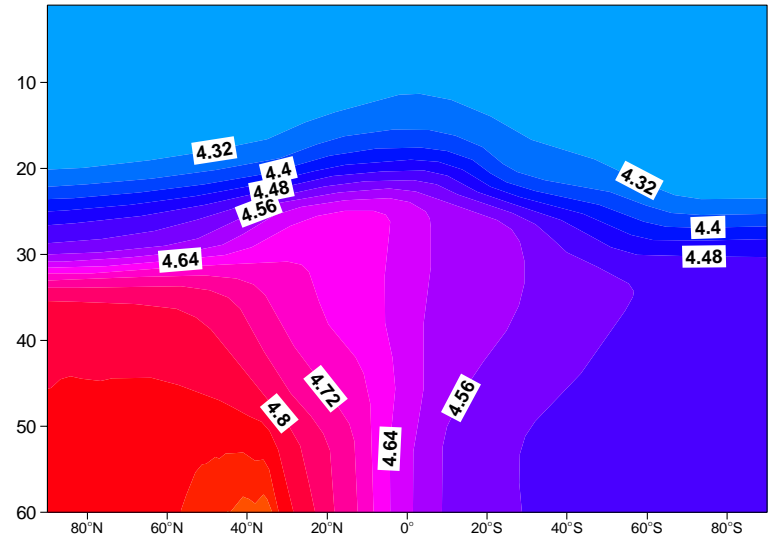

---

# Annual means of simulated tracers concentrations

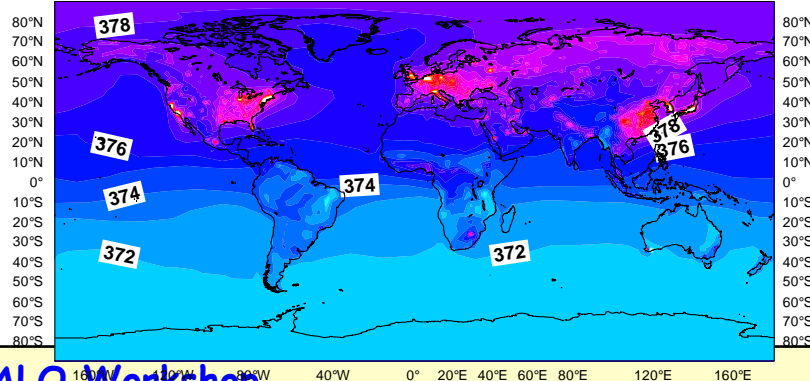

Latitudinal Gradient of CO2 concentration - 2001

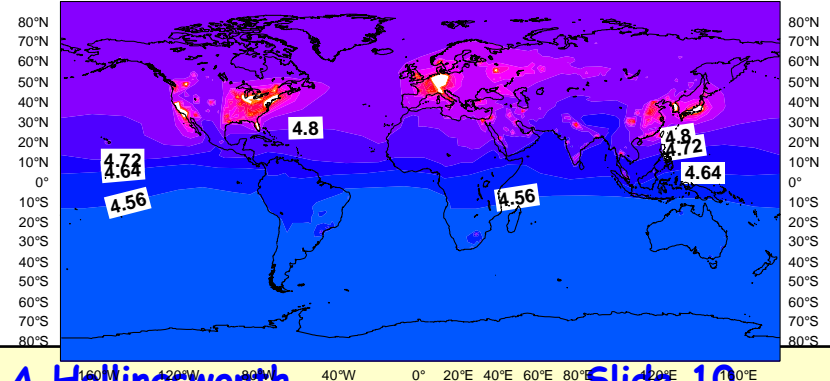

Latitudinal Gradient of SF6 concentration - 2001

CO2 concentration at the surface - 2001

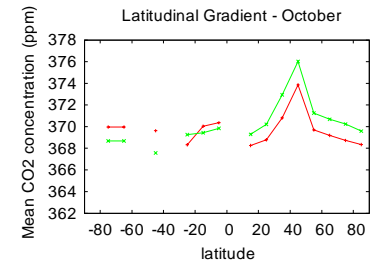

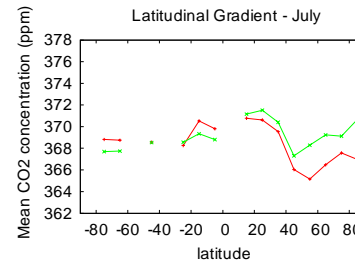

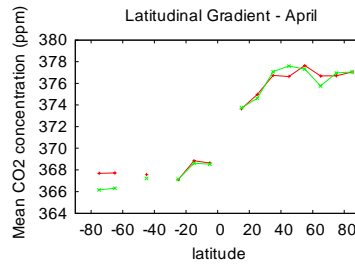

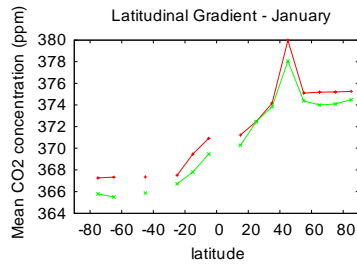

SF6 concentration at the surface - 2001

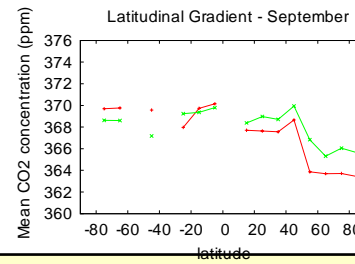

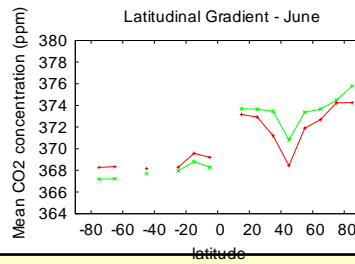

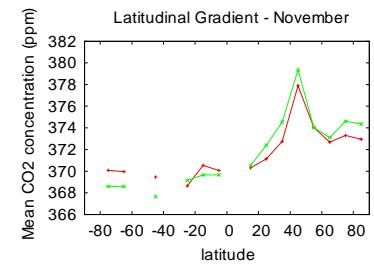

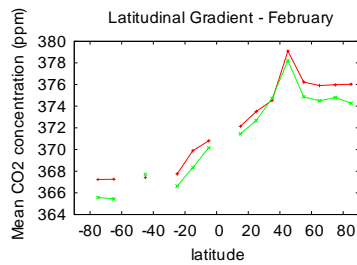

# Forward modelling verification

## Comparisons to in situ measurements at the surface

— observations  
— model

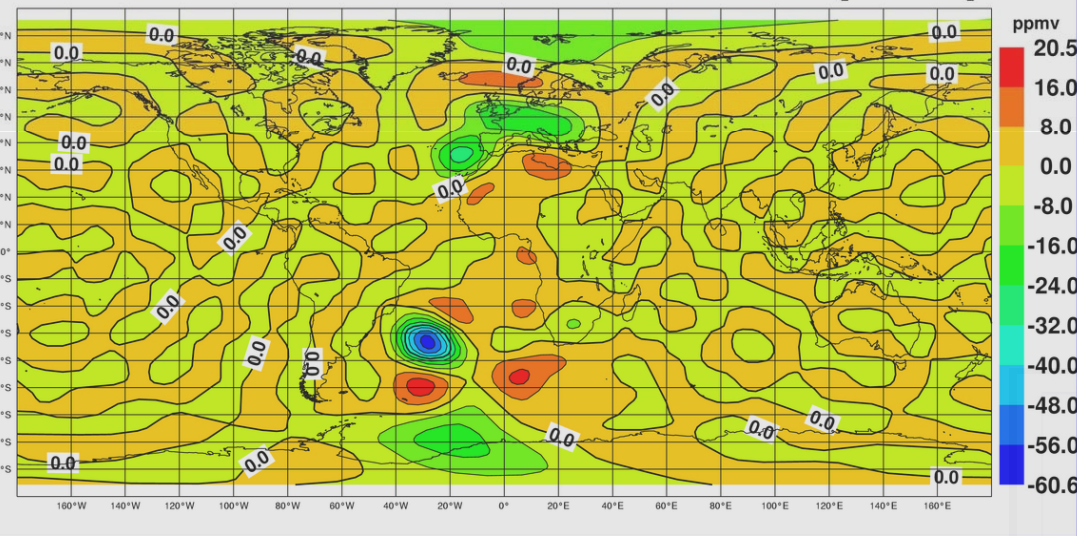

# Progress on Greenhouse Gas Assimilation

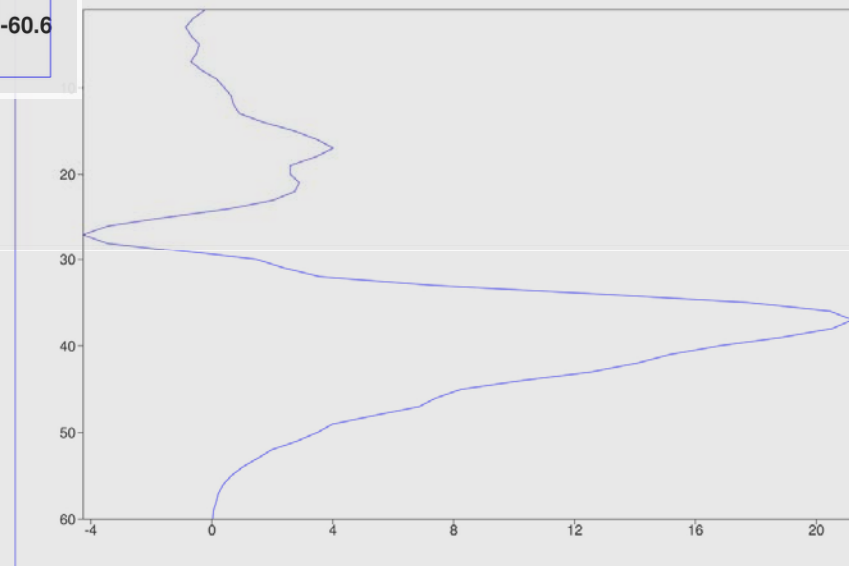

- **ECMWF & GEMS data assimilation teams made big developments in IFS (Cycle 30r1) for GEMS, which benefit the Greenhouse Gas, Reactive Gas & Aerosol projects**
  - 320 AIRS channels received operationally, including ~60 channels for CO<sub>2</sub>
  - First 4D-Var assimilations of a few orbits of CO<sub>2</sub> data from AIRS are being assessed
  - Data assimilation tools for data display & data quality monitoring in preparation

# We've got an assimilation system!!!

## CO2 Increments Level 40 (T42)

Vertical profile of TPO 20041130 2100 step 0 Expver eqac point (-46.5,5.0)

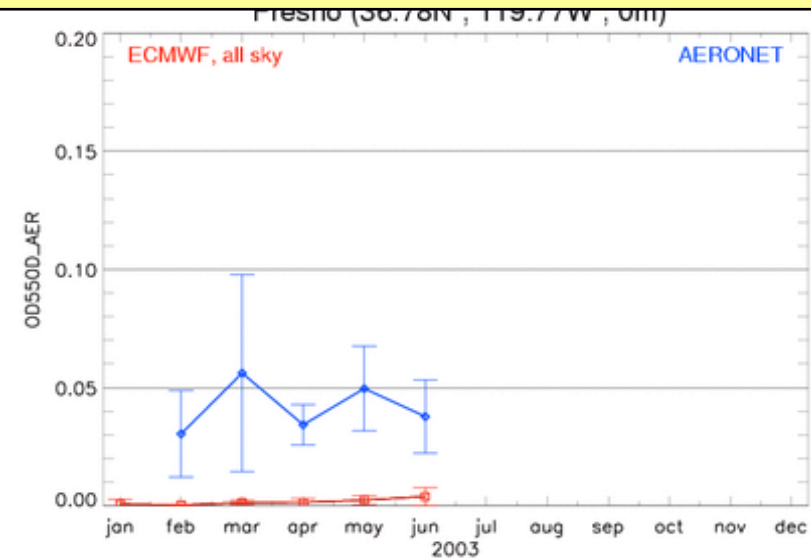

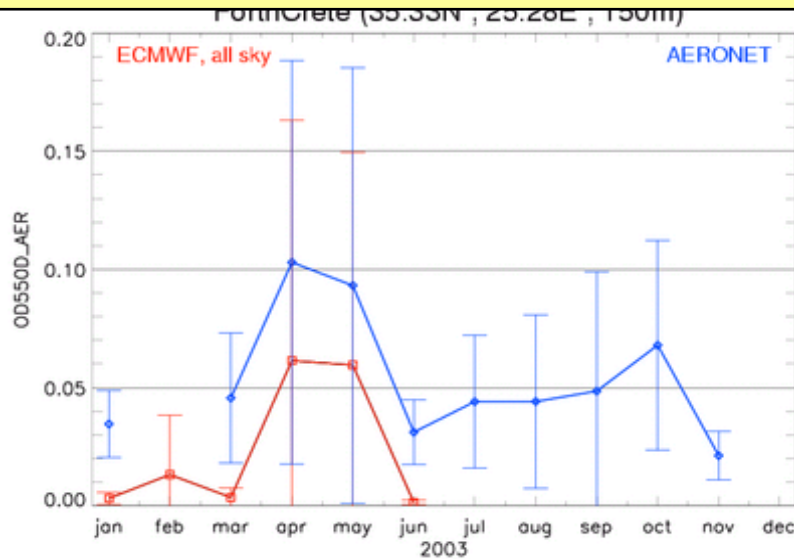

# Progress on Aerosol Modelling

- **ECMWF & GEMS numerics and physics teams made big developments so trace constituents transported by dynamics, boundary layer turbulence & moist convection.**
  - Sea-salt and Desert dust are model variables, with 3 size bins, transported by dynamics, boundary layer turbulence & moist convection. Dynamically-specified surface fluxes.
  - 12 month run with actual meteorology & free-running Aerosol. Validation against Aeronet data is encouraging.
  - Consistent model underestimation of aerosol optical thickness is under investigation
  - Code was developed with FMI for consistent UVB post-processing

# Aerosol Animation

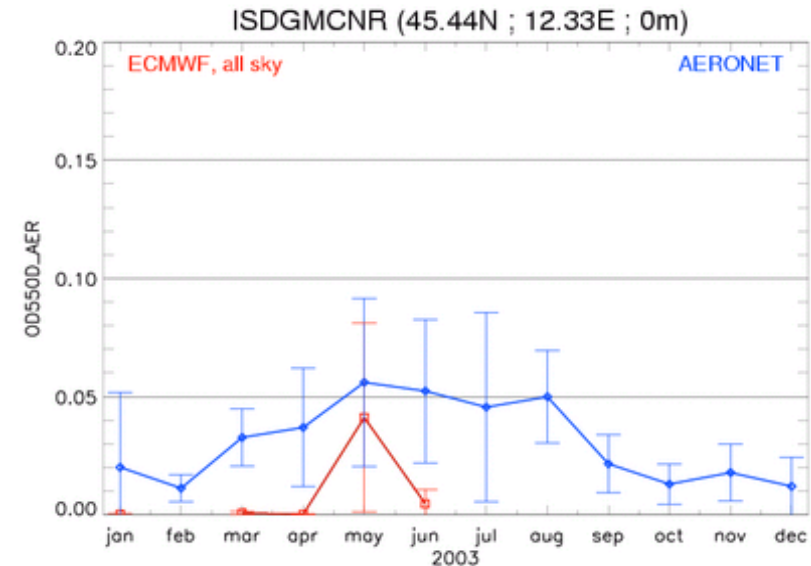

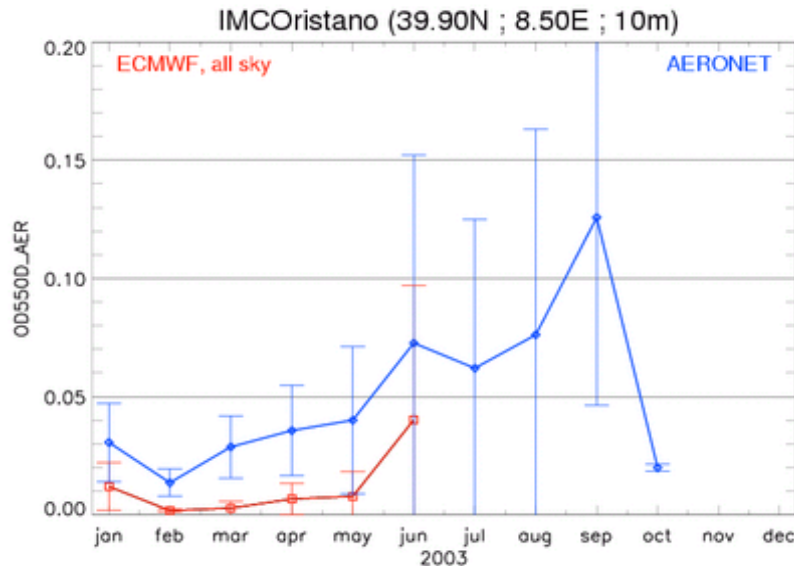

---

# Example of comparison with AERONET stations

Graph Data source Species Parameter  
**SERIES** | **ECMWF** | **AER** | **OD550D**  
**IMCOristano** | **an2003** | **m ALLYEAR**

Graph Data source Species Parameter  
**SERIES** | **ECMWF** | **AER** | **OD550D**  
**ISDGM CNR** | **an2003** | **m ALLYEAR**

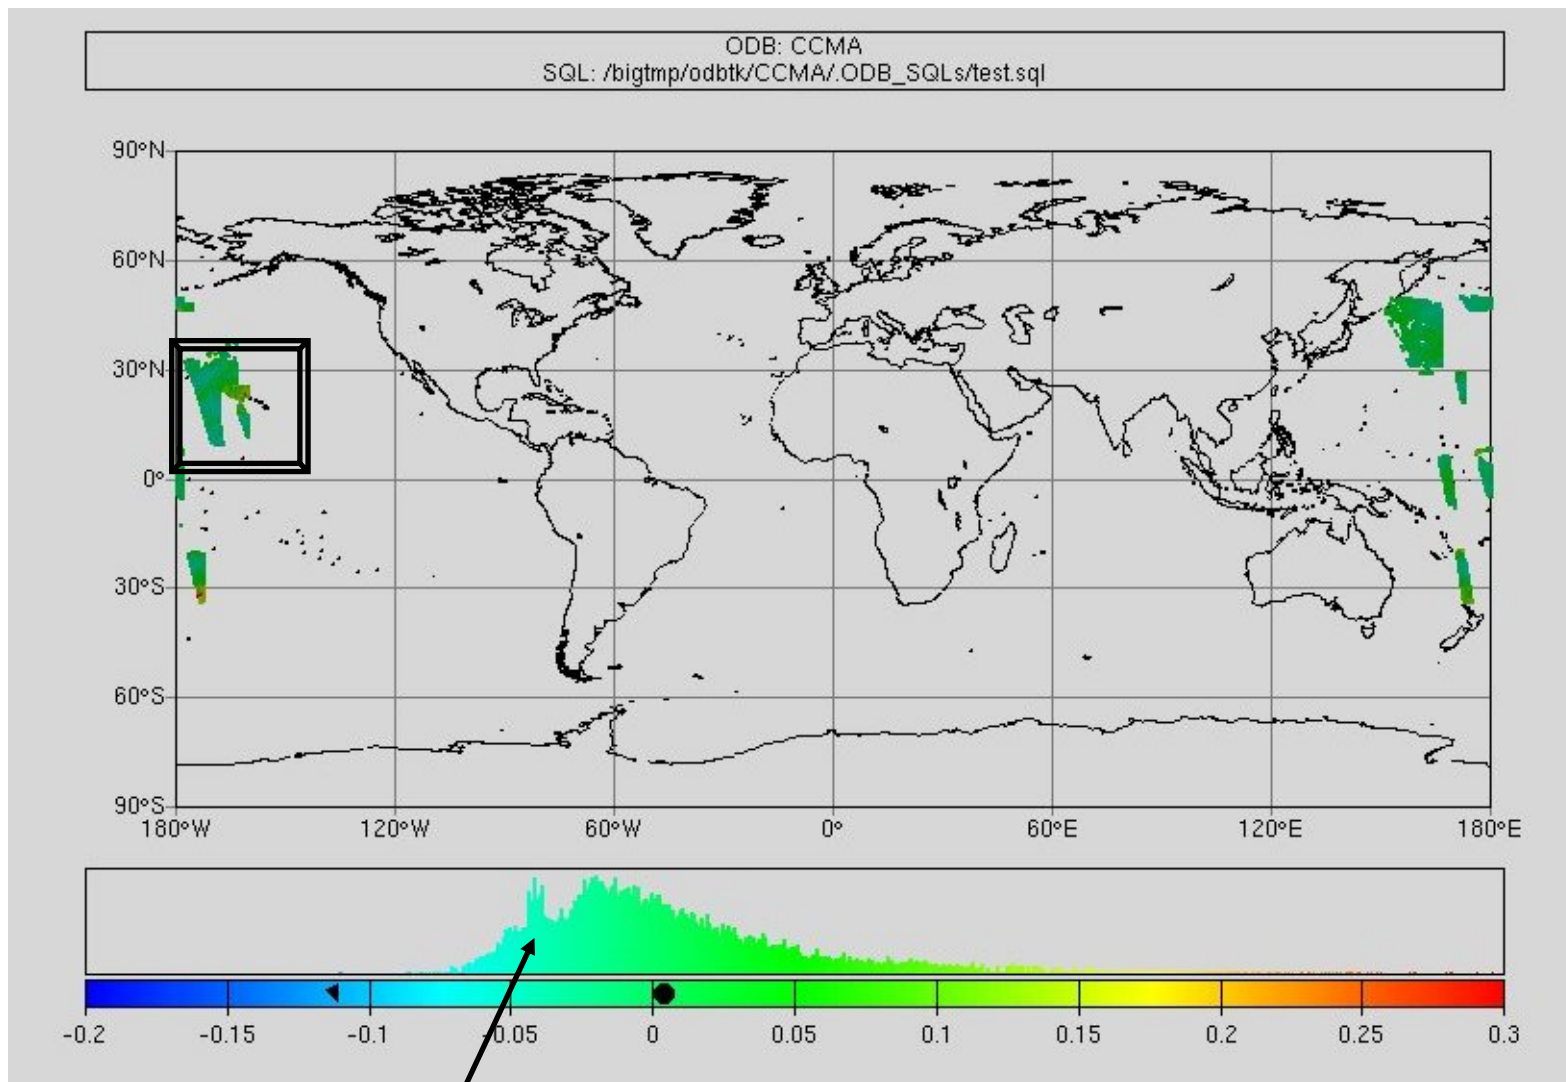

# Progress on Aerosol Assimilation

## **ECMWF & GEMS data assimilation teams made big developments in IFS (Cycle 30r1) which benefit GHG, AER, GRG**

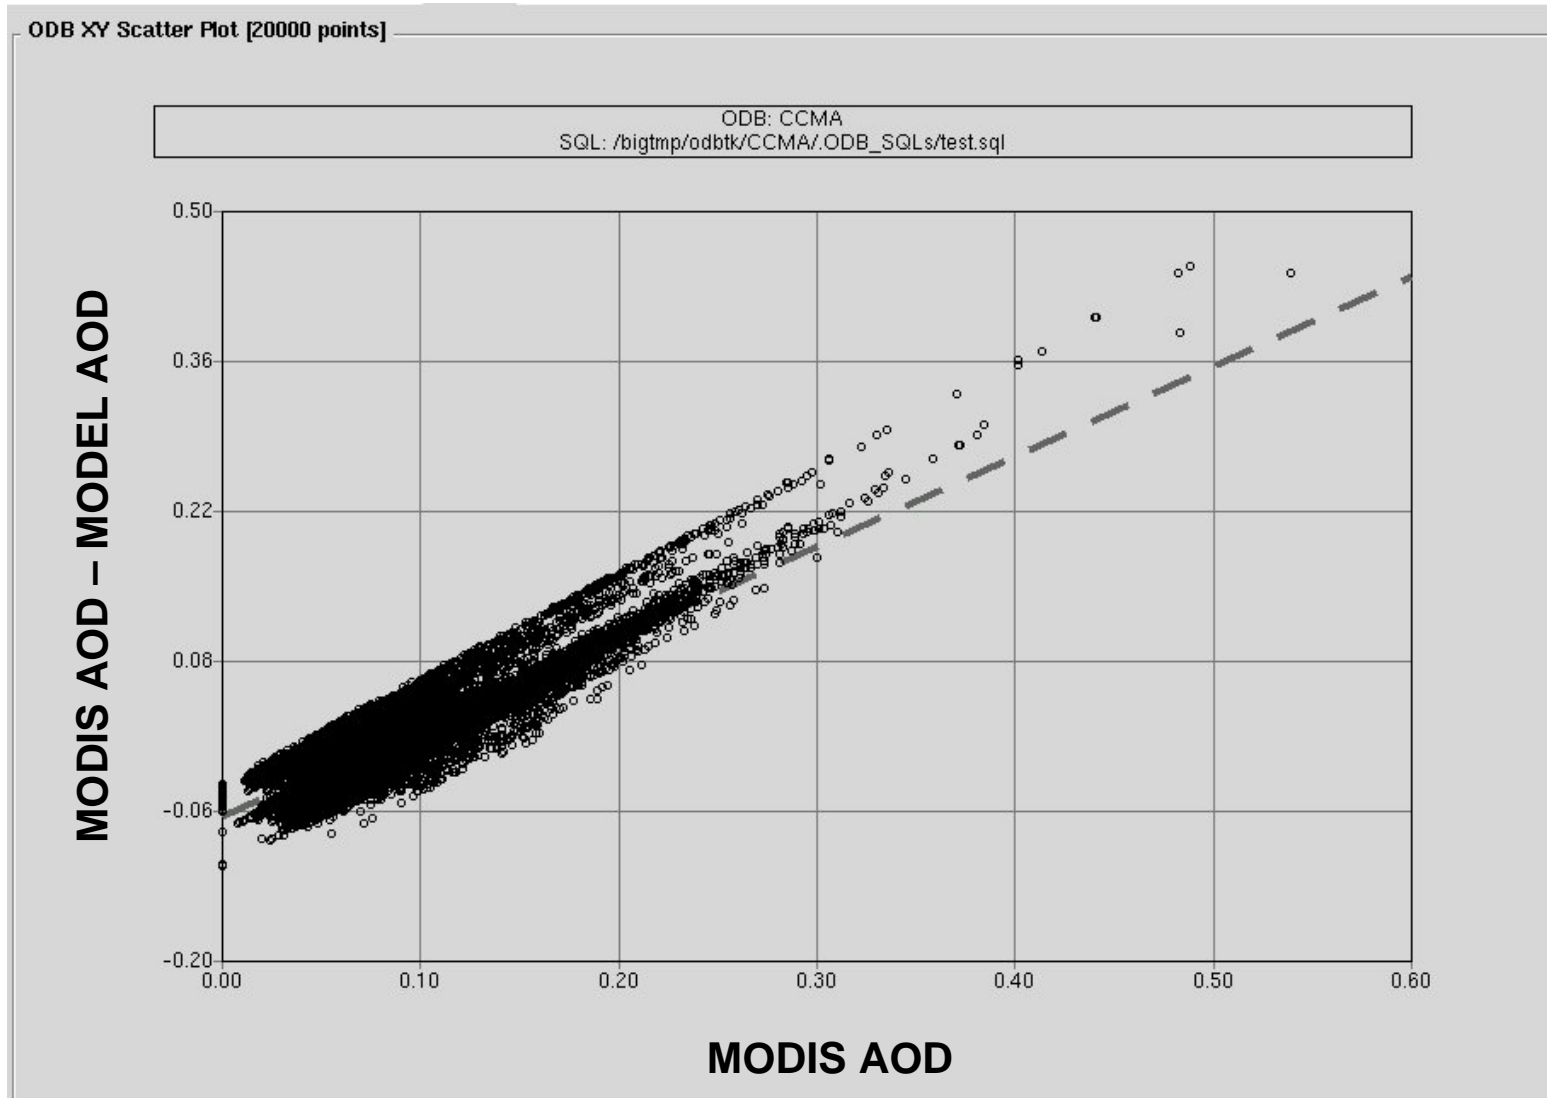

- Extensive experimentation to determine statistics of short-range forecast errors, from divergence of short-range forecasts
- First 4D-Var assimilations of partial orbits of MODIS data are being assessed
- Data assimilation tools for display, data monitoring are in preparation

# Preliminary ODB plots (2004120100 – one cycle)

## First guess departures

# Preliminary ODB plots (2004120100 – one cycle)

# Progress on Reactive Gas Modelling

- **ECMWF & GEMS numerics and physics teams made big developments so trace constituents transported by dynamics, boundary layer turbulence & moist convection.**
  - OASIS4 adopted as IFS-CTM coupler
  - Much technical work in progress on coupling, with the help of CERFACS & PRISM partners
  - Definition of P&L terms to be transferred from CTM to IFS has been agreed
  - Options for data to be transferred from IFS to CTM being assessed

# Progress on Reactive Gas Assimilation

- **ECMWF & GEMS data assimilation teams made big developments in IFS (Cycle 30r1) which benefit GHG, AER, GRG**
  - Reanalysis of July 2002 – Dec 2003, for CTMs to check stratospheric Brewer-Dobson circulation, will be ready by end Dec 2005
  - First assimilations of single ozone observations are being assessed / debugged
  - Data assimilation tools for display, data monitoring in preparation

# 2003 reanalysis for CTM partners - spec. humidity [ppmv]

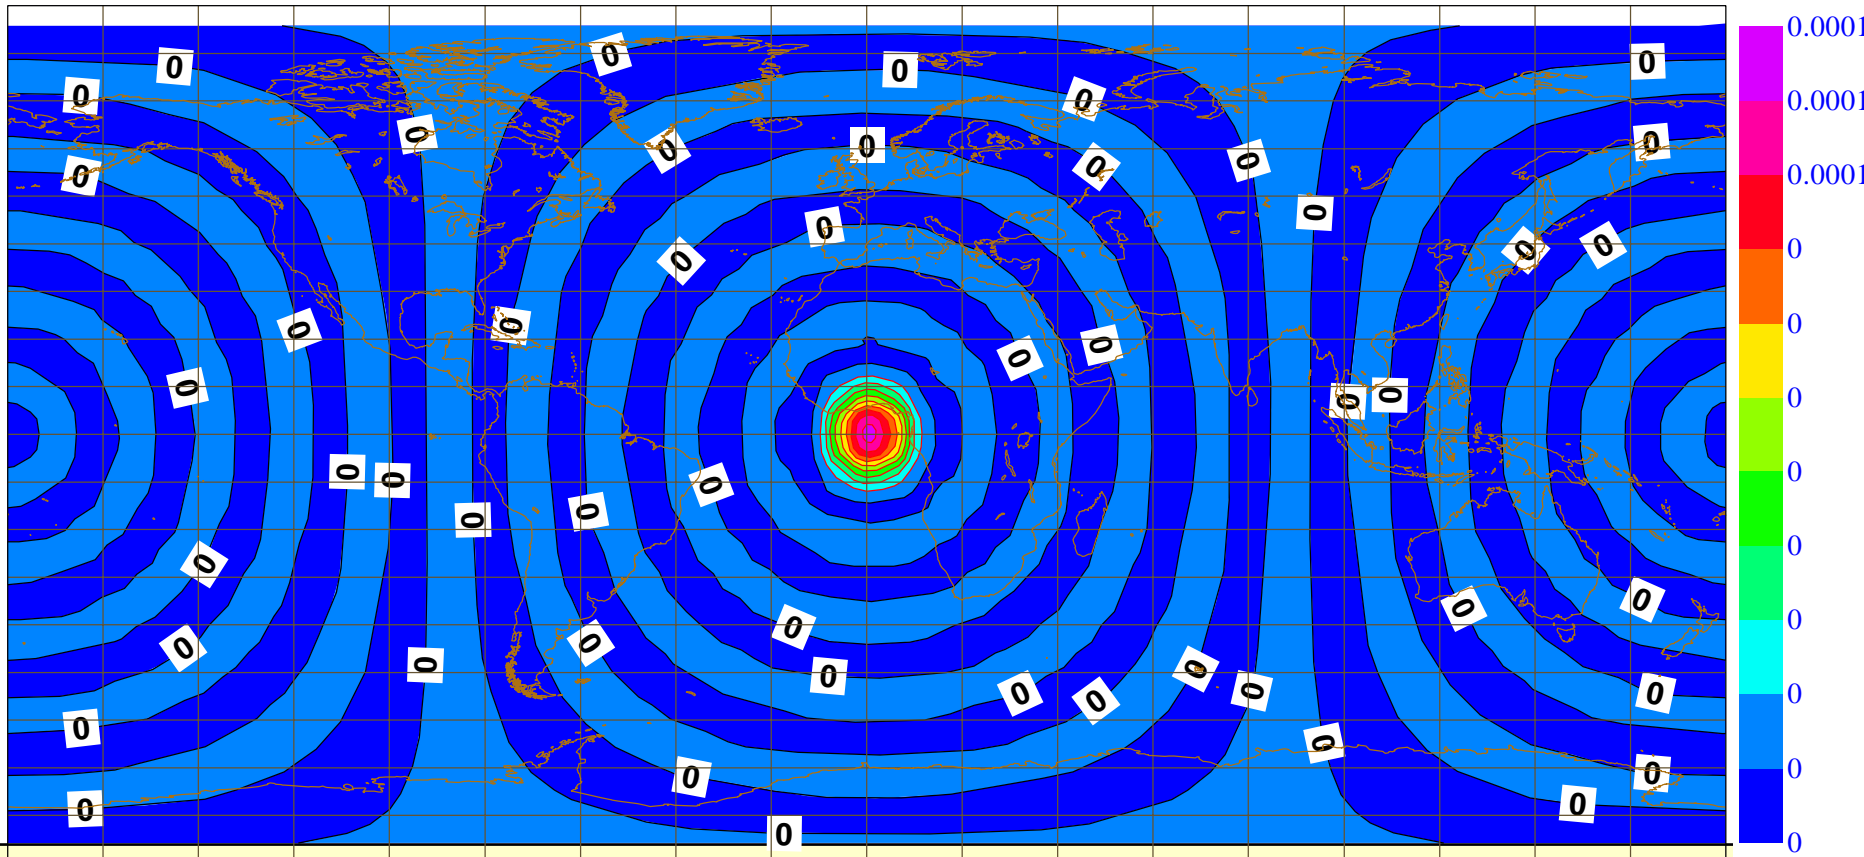

HALOE

EXP 0500

Operations

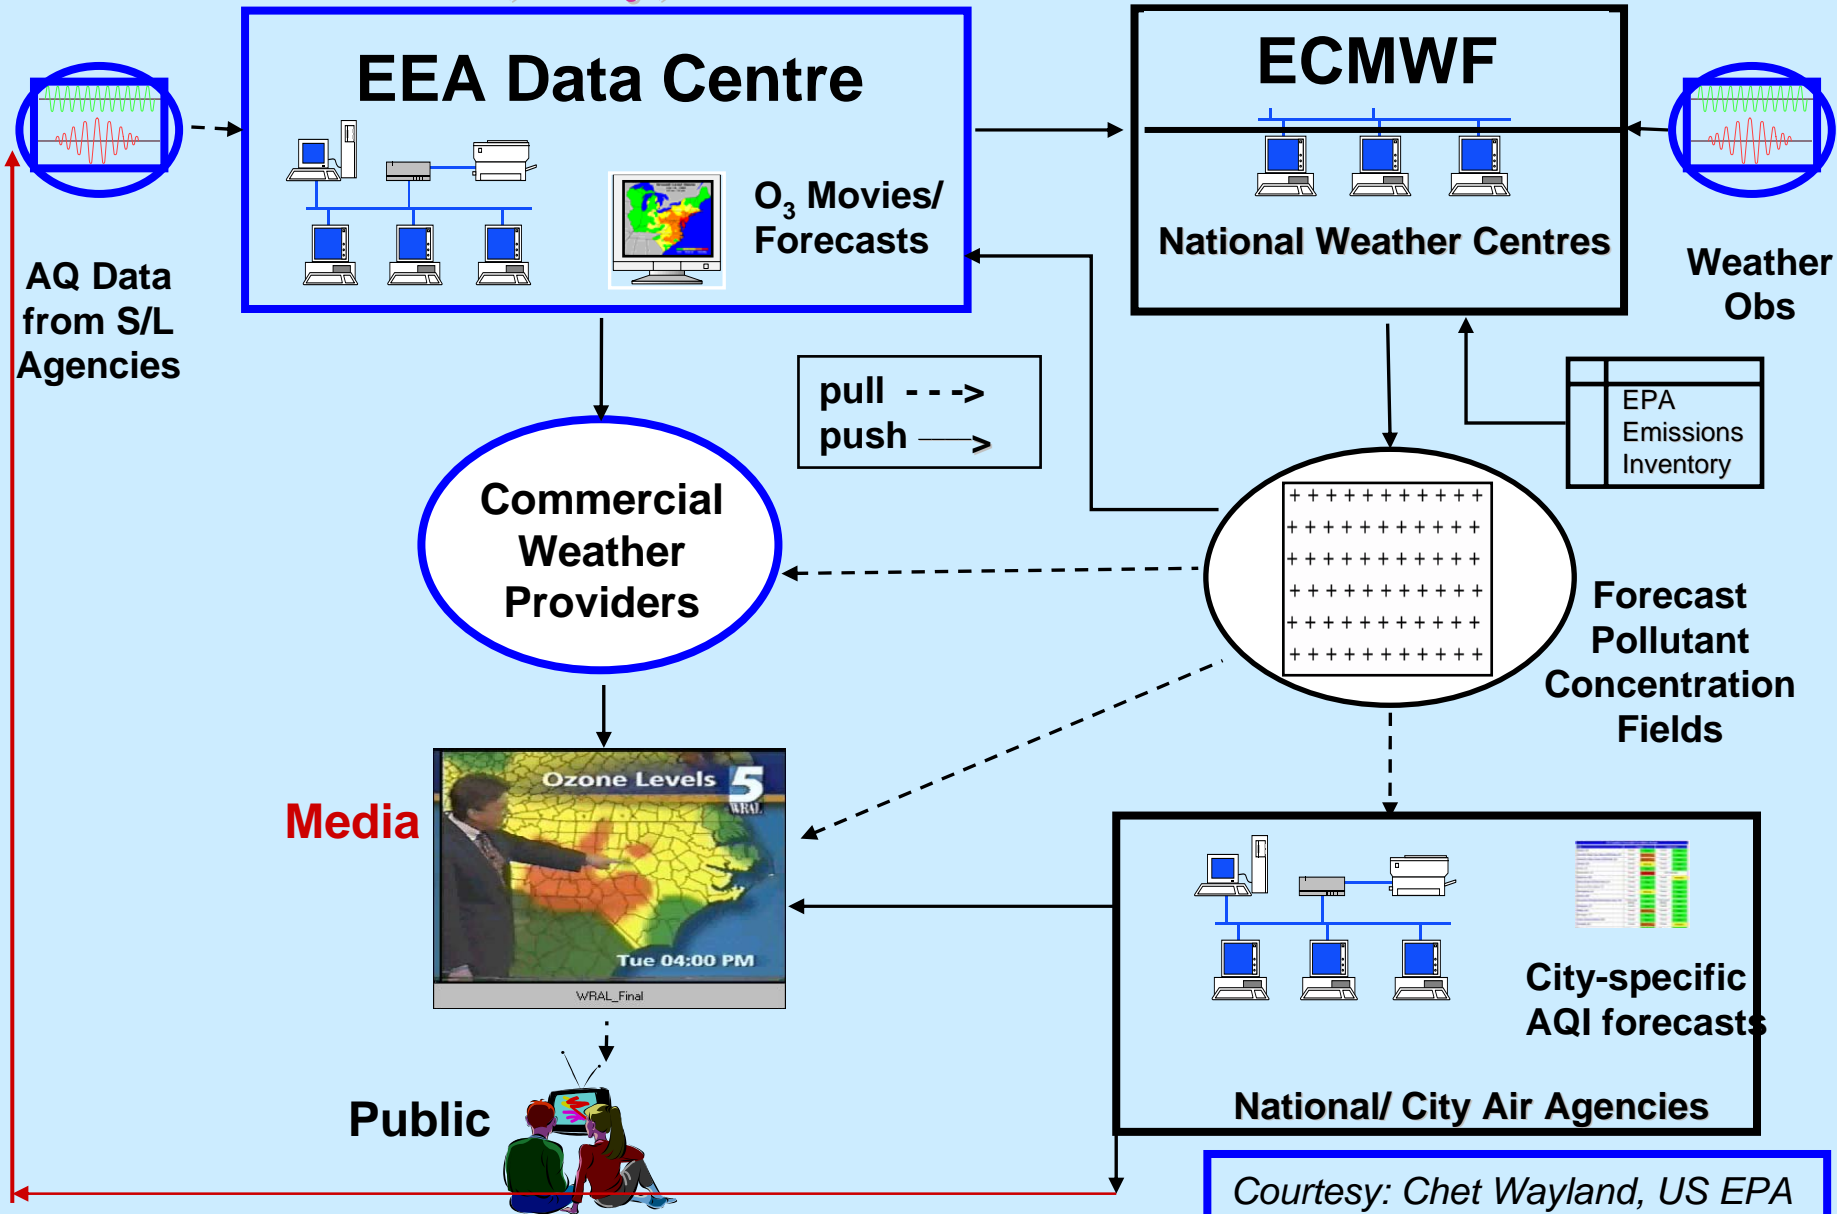

# Increment from single ozone observation

# GMES Initial Operational Configuration

## National, City, EEA & ECMWF IT Links

# Funding issues for the operational transition of GEOLAND, MERSEA, GEMS

- Current Funding
  - GEOLAND funded until end 2006
  - MERSEA funded until end 2008
  - GEMS funded until Feb 2009
- Ongoing / new activities of interest to GEMS CO2 capabilities:
  - ONC land carbon model & assimilation
  - CSP assimilation of Leaf Area Index (LAI)
  - Global fire assimilation
  - Funding is needed for these activities beyond 2006
- No further GMES funding until 2008, earliest (in FP\_7)

# Satellite issues for the early operational stage of GEOLAND, MERSEA, GEMS

- METOP on track for mid-2006 launch
- Serious cost over-runs on NPP & NPOESS. Extent of delays not yet known
- ESA ocean mission (GMES-1) launch-date?
- Prospects for a LANDSAT continuation?
- After ENVISAT & AURA, no prospect for a chemistry mission before 2015
  - Despite NASA's severe funding difficulties on the Space Station and the Shuttle, we must persuade NASA to continue operation of TERRA, AQUA, AURA as long as possible,
- Issues of access to OCO data

# Some of the many science issues for the early operational stage of GEOLAND, MERSEA, GEMS

- Use of GEMS Aerosol product in Land, Ocean retrievals from MERIS, MODIS, VIIRS?
- What is the most effective method to blend surface & in-situ in surface flux synthesis inversions?
- When will we have modelling / assimilation of ocean biogeochemistry? What will be needed from the Atmosphere, Land projects?
- What is the role of ocean surface wave breaking in ocean-atmosphere gas exchange?

Thank you for your  
attention
